

The background of the slide features a blue-tinted image of Earth as seen from space. A grid of thin, light-blue lines is overlaid on the image, creating a perspective effect. A single, solid orange horizontal line spans the width of the image, positioned in the upper third. The text "LECTURE TWELVE - PART THREE" is centered in the lower half of the image.

LECTURE TWELVE - PART THREE

To Answer These Questions

- We have to understand more about the demand for public goods and, more importantly, how the market demand curves for private and public goods differ.

To Answer These Questions

- We have to understand more about the demand for public goods and, more importantly, how the market demand curves for private and public goods differ.

The Horizontal Sum: Private Goods

- The demand curve for private goods is the **horizontal sum of the individual demand curves**.
- Because of this, individual consumers will pay the **same price** for a good but consume **different quantities**.

The Vertical Sum: Public Goods

- The market demand curve for a public good is the **vertical sum of the individual demand curves**.
- Individual consumers will all consume the **same amount** of the good but value that amount at **different prices**.

Market demand for corn, three buyers

| Price Per bushel | Quantity demanded | | | | | | Total quantity demanded per week |
|------------------------|-------------------|---|-------|---|------|---|-------------------------------------------|
| | Carlos | | Carla | | Leon | | |
| \$5 | 10 | + | 12 | + | 8 | = | 30 |
| 4 | 20 | + | 23 | + | 17 | = | ? |
| 3 | 35 | + | 39 | + | 26 | = | 100 |
| 2 | 55 | + | 60 | + | 39 | = | ? |
| 1 | 80 | + | 87 | + | 54 | = | 221 |

Social marginal benefits=
Social marginal costs

Demand for a public good, two individuals

| (1) Quantity | (2) Mr. Dove's willingness to pay(price) | (3) Mr. Hawk's willingness to pay(price) | (4) Collective willingness to pay(price) |
|-----------------|---------------------------------------------------|---------------------------------------------------|---------------------------------------------------|
|-----------------|---------------------------------------------------|---------------------------------------------------|---------------------------------------------------|

| | | | | | |
|---|-----|---|-----|---|-----|
| 1 | \$4 | + | \$5 | = | \$9 |
| 2 | 3 | + | 4 | = | 7 |
| 3 | 2 | + | 3 | = | 5 |
| 4 | 1 | + | 2 | = | 3 |
| 5 | 0 | + | 1 | = | 1 |

★ Q: Can you draw the market demand curve for this public good? Just remember to sum vertically!

Pause the presentation now if
you want to do this exercise.

✦ This supply curve slopes upwards because of the law of diminishing returns.

✦ It measures the marginal cost to society of providing each unit of defense.

- ✦ The optimal output occurs at the intersection of supply and demand.
- ✦ Here, the social marginal benefit equals the social marginal cost.

Question
What's the optimal quantity?

A: At 3 units, the combined willingness to pay for the extra unit--the marginal benefit to society--just matches that unit's marginal cost of \$5.

This marginal benefit equals marginal cost principle is analogous to both the $MR=MC$ output rule and the $MRP=MRC$ input rule for maximizing profit.
